602-Data Analytics using Python - PPT format

- **Title Slide**

  Project Title, Student Name, Seat Number, Program, College logo, College Name, University, Academic Year

- **Project Introduction**

- **Problem Statement**

- **Objectives**

- **Dataset (about rows and columns)**

  - Dataset
  - Attributes
  - No. of Rows
  - Independent and Dependent variable

- **Tools & Technologies**

  Python, Pandas, NumPy, Matplotlib / Seaborn, Scikit-learn, Flask

  (whatever tools, libraries, technologies used in your project)

- **Exploratory Data Analysis**

  - Data cleaning and preprocessing
  - Handling missing values
  - Data visualization using charts
  - Identifying patterns and relationships in data

  (Explanation about all this)

- **Prediction (Regression)**

  - One line explanation
  - Model / Algorithm used: **Linear Regression**. (For example)

- **Prediction (Classification)**

  - One line explanation
  - Model /Algorithm used: **Logistic Regression**. (For example)

- **Web Dashboard (Screenshot for design) (No Coding)**

- **Results with heading (Output) (No Coding)**

- **Conclusion**

- **Future Scope**

- **References**
